

SUSTAINABILITY SEED GRANT SPEAKER SERIES

Initiative for Environmental Equity and Sustainability at Stanford

WED, SEPT 8 | 10 - 10:45 A.M. PDT | ZOOM

Speakers:

[Rob Jackson](#), [Gabrielle Hecht](#), [Rodolfo Dirzo](#), [Sibyl Diver](#), [Emily Polk](#)

How can Stanford create a foundation for addressing the most important, interconnected social justice and sustainability problems of our times? Achieving sustainability requires attending to the deep divisions and disparities that persist within and across societies, and engaging with the interconnected histories of structural inequities, racialized violence, and uneven impacts of environmental harms. Here, we share our [vision](#) and [progress](#) in fostering community-engaged research on environmental equity and sustainability, developing a 21st century environmental equity and sustainability curriculum, and building long-term partnerships with diverse environmental justice (EJ) communities at Stanford and beyond. With seed funding support, our EJ Initiative has contributed to groundbreaking Stanford research, education, and community engagement efforts across the humanities, social science, and biophysical sciences. Highlights include partnering with [Bayview Hunters Point Community Advocates](#) to build a robust and fully open-access research infrastructure (oral history, documents, archives, etc.) covering toxic and radiological dumping in SF's historically African-American Bayview neighborhood; creating a new EJ Minor and a wide range of [EJ courses](#) centering frontline communities; and leading a growing [cross-campus hub for intergenerational EJ collaboration](#) through our [listserv](#), [social media](#), [blog series](#), and national and international [workshops](#).
